A rare condition: blackening of the hairs after stem cell transplantation

Hacer Gozde Gul*, Alı Erkurt M, Irfan Kuku and Emin Kaya
Hematopoietic Stem Cell Transplantation Unit, Turgut Ozal Medicine Center, Inonu University, Malatya, Turkey

61 years old male patient. He was diagnosed with AML 4 years before. He was taken remission induction therapy and after he get allogeneic stem cell transplantation. He had graft versus host disease after the HSCT. He was taken for six months cyclosporine. He was taken imatinip and mycopenolate mophetil also. Now he has not been using any drug for two years. The interesting point is his hair was White before the HSCT, and now his hair is black even though he has not been using any drug for 2 years.
