

The Dispossessed of Egypt Part IV: A Proposal of Self-Reliance to Attain Infallible Maintenance and Sustenance

J. H. Wassili and Cyril Baradaeus*

The Samaritan Biochemists, 279 Khaled benWaleid, SeidiGaber, Alexandria, Egypt

Abstract

Although, dependent on the limited availability of the fertile land and fresh water, agriculture remains an important economic sector in Egypt. Egypt has one of the largest and fastest growing populations in the world together with > 96% of the total land area is an uninhabited desert and 96% of the population is concentrated around the River Nile's valley and the Delta. As of 1952-coup, massive urbanization turned into a lethal threat to the livelihood of the Egyptians. Together with limited sustenance, other factors contribute to lack of medical care, urgent social services and education. For example, ramifications of far-fetched aching poverty, environmental intoxication, bacterial and viral mutations; say covid-19, are subject to the unexpected restrictions of some gauged liberties. Why not? In modern Rome; liberties of the masses are Trumpized by the very few. In other words, when a population is coerced to a specific course dictated by a major power; breeding of psychological insults, decline of medical care and education, necrosis and ruin of the environmental sanctity are maximized. Scientists waste time and efforts applying for research grants to introduce medications to futilely camouflage consequences of pollution-induced diseases but NOT remedies. Worse is, void of enthusiasm to entertain preventive protocols as expected measures would inevitably clash with the basic canons of the MIC. It is a Sisyphus routine. We never learn à la the mountain gigantically churned and gave birth to a mouse. Thus, self-financed scientific organizations have to take the lead to better the ailments of their particular societies. The current manuscript is signifying the tailoring of modern technologies to facile conversion of arid desert into arable plots. This is to generate as possible the basic necessities of food commodities for an exponentially multiplying populace. Specifically, our property, the eternal water supply of the River Nile is aggressively threatened. Considering the positive results of our toil, we are advancing an economically feasible mechanism to turn portions of the deserted Sinai desert into green land. This is subject to government's assisted subsidized sale/ distribution of (I) specific desert lot per family, i.e., urban expansion into the desert which may preserve valuable acreages of agricultural land in the ND, (II) the High dam sediments rich in natural nutrients and minerals to fertile the sandy lots besides raising domestic animals and birds as a source of consumable protein and natural fertilizers, and (III) China made RO desalinating units to provide families with fresh potable and irrigation water. Thus, peacefully evade unnecessary ramification of conflicts emanating from the recklessness and adventurer approach of the Ethiopian to policies pertaining to the calculated Egyptians' ration of water.

Introduction

We are elaborating on our thesis: preventive measures are more effective in containing spread of diseases vis-à-vis grant applications to innovate medical cures to a wide spectrum of maladies [1,2]. To start with, it is imperative to acknowledge, it is not the application of science and modern technology that may untie the acute-shortage of sustenance dilemma but it is also the deeply rooted culture of the said afflicted populace which may usher recoveries. Below is a pertinent-concise consideration to the said factor, e.g., the recovery of 1945-Japan [3], India's Gandhi [4] and 2013-Egyptian ladies [5].

Both countries, Egypt and Japan, are of past substantial contribution to culture and civilization, however, were devastated by the western so-called democratic nations; (I) Egypt, that is in the brains, conscious and the DNA of the very many nations was holocausted by the British longstanding ploys of Mr. Hempher, G. Bell and TE. Lawrence [6] which climaxed in 1928 with the transplanting of H El Banna [7] in the psyche of the illiterates, thus, the 7000 years toil of civilization was quenched in 75 years of occupation, and (II) Japan was similarly holocausted by the US Hiroshima and Nagasaki [3], thus in few minutes lives of > 220,000 individuals were extinguished. In this context, it is most pertinent to note the Messianic vision of the former UN Secretary General Prof. B. Ghali: "For us, genocide was the gas chamber, what happened in Germany. We were not able to realize that with the machete you can create a genocide. Later we understand this"[8]. By all measures, this sophisticated wisdom dwarves the most

recent drama of public parading the Bible in front of a Church. As a product of distinct soldiering, General Sissi expressed his distaste of wars among neighbouring countries as: it will leave a bitter and unforgettable taste in the lives of inhabitants of the warring nations. In conclusion, the yield of humans' misery and causalities schemed by the many Western democracies, who masterfully took advantage of the innocence of other nations, could be similarly defined as holocausts. For example:

- the first and second China-Britain war of Opium, 1839-42 [9] and 1856-1860 [10]. Disgracefully, under the most-favoured-nation clause, all of the foreign fat-cats operating in China were privileged concessions in China
- on April 13, 1919, Gen. R Dyer, considered a gathering of the nationals to celebrate the Sikh New Year in the Sikh holy city of Amritsar as a violation of the prohibitory orders on public assembly, thus the British soldiers harvested the lives of several thousand unarmed civilians, including women and children [11],

Figure 2a and b. Truman's mass murder Hiroshima, 1945; Japanese culture

- most recently, on December 2, 1984, an accident at the Union Carbide pesticide plant in Bhopal, India, precipitated the release of at least 30 tons of the highly toxic methyl isocyanate, as well as a number of other poisonous gases which left more than 600,000 people victims exposed to the deadly gas [12], and regardless of human casualties, the Western democracies incited their ploy of dogmatic hatred wars to disintegrate the Indian subcontinent, Yugoslavia [13], Iraq [14] and Syria [15] to several plots according to religious boundaries. The latest was the Rwandan 100-day genocide [16] which left the UN court with millions of slaughtered Africans (Figure 1).

Although both are of dissimilar tendencies, while the entirety of the distinct Ancient Egyptian heritage was scrupulously querying the specificities and the metaphysics of the after-life, the Japanese culture gave a substantial emphasis to human strength and weight to the categorical fidelity of the Emperor. Thus, both deeply are rooted cultures which allowed for proportional recoveries post major holocausts, Truman-1945 and Mursi- 2012 respectively. Although the Egyptian recovery necessitated longer induction-period, the Egyptian ladies prompted the peaceful disobedience of June-July 2013 to rekindle Egypt vis-à-vis the Japanese astronomical recovery post the Truman holocaust. In 1952, the Japanese were already performing the traditional Sumo Wrestling and to the other end producing their superbly artistic ancient art, viz. (Figure 2a and b).

The societal texture of the dispossessed in Egypt

It is our contention; self-reliance to fare an infallible medical and educational services, protocols of equal distribution of extracted natural wealth and sustenance to all Egyptians are of a paramount significance. Egypt was accurately described as the food basket of the Roman Empire. As perceived, at the might of the Romans dominance, the council of Chalcedon [17] was convened to primarily liberate Rome from the theological dominance of Alexandrian school of thoughts. We see it differently? It was a 451-Arab Spring [18]. That is a political motivation cascaded in religious dressing to tame the Egyptians for the purpose of securing the weight and varieties of the seasonally food basket to Rome. Alternatively, when the East turned to Islam, hurriedly the 1672 Leibniz's Egypt plan [19] was refitted as the Arab Spring. While the Leibniz plan administered the creation of a Catholic off-shot in Egypt, the 2011 Arab Spring failed miserably as collapsed within few months of the Mursi's Wahhabi off-shot presidency. The difference here is the Arab Spring was architected by an intellectually adolescent product of an Indonesian Madrasa (H Obama) vis-à-vis the Leibniz's plan acute theologian Johann Philipp von Schönborn, the Archbishop-Elector of Mainz. (Figure 3)

In 2K+20, with the exponentially multiplying populace, desertification together with intoxication of the green arable lot, water pollution and migration of farmers to large cities (Cairo and Alexandria), the equilibrium of extraction and distribution of natural

Figure 3. Egyptian ladies 2013-peaceful disobedience the induction of the cultural recovery in Egypt

resources to health and educational maintenance failed and dwindled to the minimal, if there is any at all. Thus, as of 1952 to 2013, general conditions of the Egyptians deteriorated in terms of bankrupted education, social services and medical care, dogmatic abuse, societal stress and characterization, visualize portraits below.

By June 2013, the basic societal fabric of Egypt was in total ruin:

- Typically, the obedience to the dictatorship, specificity and metaphysics of a monotheistic supreme deity was the causative factor, viz., the dogmatic canonization of violence against the infidel state, toxic societal absurdities - as mujahidin's right to mate with mother, sister or boys in case suitable female volunteers are unavailable [20]; wide spread female circumcision [2], pedophiles [2], incest [2], absent sex-education and medical supervision of females volunteering sexual services, etc. Prior to prohibiting sex-services, viz., 1885 license below, females underwent periodical and compulsory medical assays. At the moment, a rise in females with vaginal HPV, sexually transmitted genital warts and trichomoniasis was observed which may partly account for increased % of males with prostate cancer.
- As of the 1952-Wahhabi coup, Egypt is plagued with a high rate of the handicapped, ~10% according to WHO which in 2001 reflected an estimate of 2.3 million cases. As expected, the intellectual disability, visual and auditory impairments and physical handicap represented 73, 12.5 and 14.5% respectively. In 2017, percentage of disabled individual climaxed to 2.9 million. According to our enquiry in a village in Upper Egypt, ~12% of the newly born infants showed a range of necrotic brain cells.
- In the 1990s, in lieu of the environmentally safe organic fertilizers - animal manures - without deliberations with a council of organic chemists, Y Waly the former Minister of Agriculture/ Egypt introduced pesticides and herbicides in farming [21]. The devastating consequences were the unpredictable sharp rise in carcinogenic insults; specifically youth and infants and obesity. Regardless, HPV is a contributory factor; our survey revealed 0.17% of the populace is contracting a wide spectrum of malignancy, specifically prostate, liver and bladder in males and vaginal, liver and breast in females. The reported cancer mortality rate in Egypt was 27 per 100,000 inhabitants in 1942 was substantially lower than the 122 and 183 in the US and UK respectively. Currently, Egypt scored a rate of 0.5-1% cancerous contraction vis-à-vis 5-6 and 2-3% US and UK respectively [22].

One of the major threats to health is the annual manufacturing of fertilizers from sewage sludge. According to the National Council for Services And social development's report, ~ 1.840 million cubic meters of said sludge are treated, while 1.1 million are discharged without treatment as landfill. Firmly, the state has decreed: (I) lead concentration should not exceed 300 mg Kg-1 in the discharged wastes and (II) treated sludge is used only in planting tree forests and plants that are not eaten raw [23]. Nonetheless, should sludge does not conform to the health specifications and the notoriously lack of stern control over the locations of use, it is expected to infect the populace with many insults, say liver cancer and kidney failure, not to mention plant and animal poisoning, and polluting the agricultural land. To top it, for the purpose of lucrative finances, cat-fish is cultured in sewage system of large cities in lieu of expensive feed pellets in universally standard aquaculture, thus offered to the middle class consumers at substantially reduced prices. However, to the affluent, fresh water cultured shrimp that is fed minced sewage cultured cat fish is offered at a higher price tag.

Furthermore, the general hallucinations which deliberately embalmed the gatherings of the innocent populace who was lurking for the bare cognizance of their minimal necessities and amid the arranged outburst of slogans void of any tangible substance, the cyclonic 1952 coup-officer announced the harebrained nationalization of the Suez Canal. The consequences were the disastrous defeat of 1956 and 1967, viz. below (Figure 4).

The disastrous consequence of the absolutely unnecessary reckless manoeuvring 1956 and 11 years later; 1967 was an abundance of religious hallucinations. Globally this circumstance prompted the 9/11 WTC 2001 [24] and the never-ending:

- I. the desertification of the arable land and the canonization of the ghettos of the dispossessed at the boundaries of large cities and Upper Egypt, and
- II. the degradation of societal ethics and humanitarian values and acute characterization whoever is casted outside the privileged social-class and religious inclination

Above (I) and (II) were the most suitable culture medium for infestations of a wide spectrum of tropical diseases, mutations of bacterial and viral agents into novel subtypes that is resistant to known medications. That is another supporting example for our thesis of

Figure 7. The dispossessed of the Rubbish Collectors quarter in Cairo/Egypt

“preventive measures are more effective in controlling diseases vis-à-vis allocations of research funds to invent novel sedatives to relieve pains of new diseases.” (Figure 5)

Without protective measures of distancing and wearing masks, on a religious occasion 2021, a bishop's benediction of the crowd Upper Egypt, a crowd at the Kumbh Mela festival in Haridwar and break of Ramadan fasting in Jerusalem.

Portraits below are an essential part of our materials on societal anguish. These among the very many are urgent examples of the heavy challenging burden, the 2013-Egyptian ladies laid at General Sissi's table. (Figures 6 -12)

Ramification of Societal Imbalanced Distribution of Wealth

Innovatively, the dispossessed acclimatized themselves to the rubbish plagued milieu and/ or living among the dead, the Necropolis/ Cairo. Thus, as per above portraits in their available living space, goats and donkey were in cohabitation with the disadvantaged to provide for meat and milk and transportation respectively. This unfortunate environment was the optimal for contracting a wide spectrum of many diseases beyond the limits of the most rigorous medical care. At any rate, the finale of the scarcity of education, medical care and equal distribution of extracted wealth is the spread of diseases, maximized dogmatic radicalization which would provoke incest, characterization of who dares to differ, tendencies for violence targeting women, physical and sexual abuse of children. Specifically as in the hard labour of collecting rubbish, begging, sex to affluent nomadic on holidays tour [2], etc. Like-wise; it is most apparent in overwhelmingly > 95% staunch white Republicans-Christian, as in Greeneville/ Tennessee and its surroundings are resistance to the Covid-19 vaccine. The rational is; (I) it's God who does the healing, (II) it is a win-win situation without the Covid-19 vaccine - longer life on Earth or, for the faithful, eternal life in Heaven [25]?, (III) laypersons' conspiracy worries pertaining to the vaccine may include aborted fetal tissue and (IV) according to a hard core evangelical Christianity: we take exception with the government pressuring us to inoculate against Covid-19. It is far more complicated

as the few legislatures of the Monotheism deity passed the verdict: it is a saga of faith, freedom. Thus, it is the fear of committing a sinful disobedience to the mighty which drove the rural USA strict evangelists to decline Covid-19 Vaccine. Above rational (II) is a rather interesting logic, indeed? Why routing to eternal life in heaven should involve the agonizing finale in an oxygen chamber?

Here is below another example for General Sissi heavy load, the disintegrated fabric of the society that is emanating from human crowdedness and poverty, within the last few days of 2K+21, the following crimes rocked the mild-tempered Egyptian society:

- I. 40 y Emad Ahmed, Faiyum Governorate, slaughtered his 36y wife and his 6 children,
- II. Ibrahim Ahmed, Daquahlyiah Governorate, slaughtered his wife and his son while the three daughters managed to escape the blood bath,
- III. in kafr Bastawisi/ Gharbyiah Governorate, as grown tired of her advice to quit narcotics, Mahmoud killed his mother,
- IV. a father was killed for withholding approval of his son's marriage, the 40 y unemployed smashed his father's head with a hatchet, and
- V. in Bohyrah Governorate, as had doubts of the wife's extra marital affair, an unemployed male smashed his wife's head with an iron rod.

The themes of the crimes above could be labelled as Interfamilial Slaughters. Rational interpretation suggests these crimes are logical manifestations to the perpetual ceremonies of the Chosen One's Self Delusions pertaining to the Allah's given permission to slaughter whoever deviates from his/ or her folks, e.g., the sermons of W Ghoneim, Y Quaradawi, etc. [26]. There are ample of pencilled states laws to dealing with crimes of public incitation of violence. However, this particular dilemma is more subtle which calls for the intellectuals scientists and psychiatrists à la Noam Chomsky and Sigmund Freud respectively of the nation to deal with it otherwise the fabric of the society will collapse. These psychologically disturbed individual should be treated in conventional well-guarded psychological wards to untie their infectious disturbances versus the lenient political refugees in Turkey and/ or nomadic oil rich countries. It is our contention, this infectious psychological disturbance has transcended to infect the most passive and conservative congregation, viz., the 2018 massacre of Bishop Epiphanius, the abbot of St. Macarius Monastery. The accused monk was decommissioned prior to states' trial and execution [27]. The funeral of the decommissioned monk accused of killing abbot Epiphanius was almost a celebration of a martyr. This unnecessary emotional exaggeration is a negative and a shy reaction to inner fears which cannot be expressed publicly. We see it as: since the Akhenaten introduction of the dictatorship of Monotheism which captivated the world as of St. Paul-induced collapse of the Roman Empire, the Egyptians became masochistically bound to cannons of non-violence. However, would violently react to any amelioration, viz., the 415 assassination of the Egyptian-Greek Hypatia, a mathematician and a philosopher, who lived in Alexandria, Egypt [28].

The *Arab Spring* synthesized the inhumane conditions of the Syrian refugees. The most dogmatically-biased elements found welcoming refuge in Turkey. Allowing these radicals a passage Turkey to Europe and/ or the USA was an unexpected threat when the 2Hs - Hillary and Hussein - architected the *Arab Spring*. The deliberate failure to carry the disastrous consequences of their political adventurism was a

The Syrian refugees

Abuse of a Coptic monk in Jerusalem

Figure 13. The Syrian Refugees

massive eviction of the Syrian populace to concentrate into insanitary concentration camps in Europe and villages close to the Turkish borders. These brutal circumstances and media trumpeted characterization led to a disturbing outcome, viz., in northwest Syria concentration camps, the overall number of suicides in the area has risen sharply over the past year, jumping by 86% in the first three months of 2021 in comparison with 2020. According to Save the Children; ~ 20% of the suicides attempts are carried out by children were committed by children. According to the recent reporting of Save the Children, at least 42 of all those who attempted suicide in northwest Syria in the last three months of 2020 were aged 15 years or younger, while 18% were adolescents between the ages of 16 and 20. Most recently, in Hama camp, a 14-year-old boy took his own life in a displacement camp, the latest in a series of such cases recorded [29].

Early synthesis of dogmatic radicalism ushered by Cater-Sadat's axis has turned the already male oriented Middle Eastern societies into a suffocating milieu to females' liberties. In general females' behaviorism was dictated according to 1400 y past elders by sermons of W Ghoneim, Y Quaradawi, and the likes. The outcome was proportional; that is the context of the Egyptian family was exposed to many social disasters following the June 30, 2013 massive rejection of dogmatic radicalism. Most prominently is the currently the high rate of wives' abuse and killing of their husbands. According to the UN Crime Research Center, worldwide Egypt ranks first in the rates of interfamilial violence. In brief, the radicalism of Sha'arawi et al has turned the typically Isis-life giving Egyptian women to the front of beating and killing of the aggressive husbands, with 28%, followed by America with 23%, Britain with 17%, and India with 11%. According to the study, more than 6.5% of married men in Egypt are at risk of being killed by their wives [30] (Figure 13).

Worse is the conclusion of our rigorous scrutiny of the physical health and typical behaviourism among children in the range of 6 m to 7 y, living in these ghettos. Alarming, a score of > 12% of examined children were found autistic (as in aloof and detached with no eye contacts, fails to develop appropriate ties with adults, does neither reach out to be held by mother nor seek cuddling, lack of spontaneous sharing of interests with others, etc.) Although engaged with urgent dilemmas as the Ethiopian Renaissance Dam crisis, the major blockage of the Suez Canal, frequent train accidents, etc., at every possible occasion, General Sissi is not only fatherly attending to all the needs of children with a wide spectrum of mental and physical incapacitations, females and males alike but more significantly educating the public on the indispensability of societal care to individuals with these disabilities.

Nonetheless, our observation together with the mushrooming self-inflected *de-novo* computer-autism that is emanating from long hours of predetermined isolation behind the internet and computer games, it is deemed essential for the Ministries of youth and Education to prompt

novel means of sportive education as a feasible alternative to salvage the youth of the nation. In this context, genes are a powerful causative factor of autism. Most recently, researchers pointed the set of bacteria that inhabits the gut as a possible factor. Although controversial, nonetheless a new study offered a support for the supposedly gut-brain link. Upon colonization with microbes from the feces of autistic individuals, mice were found to develop autism like behaviour. This observation does not necessarily imply: gut bacteria may cause autism, but may be indicative at least in mice: the contents of the gut may contribute to some characteristics of autism. Furthermore, many researchers are inclined to agree: microbes may influence the brain via multiple mechanisms; especially gut bacteria produce neurotransmitters, e.g., serotonin, dopamine and γ -aminobutyric acid.

Therefore, in this short contribution we are discussing an alternative possibility to extract wealth from nature's infertility. That is a family-wise agricultural expansion into the desert stretch by the Mediterranean shore. This was done by means of RO desalination of the Mediterranean water with precautionary measures to remove micro-organisms and micro-plastics and topping a sand layer with the clay deposits of the fertile soil collected from the area around the lake Nasser.

Observing, the unceasing motivation and phenomenal success, the current Egyptian presidency is actively toiling to remedy this century long dilemma, it became the imperative obligation of the civil society scientists to complement the efforts of the government. That is to recruit their thoughts and experimentations to improve the lives of the dispossessed, specifically the most impacted individuals, i.e., women and children versus the negative ricochets of the very many events, for example:

- (I) in the age of manoeuvring the ricochets of nomadic ignorance, an unknown with pointy dogmatic militarism and bias, a Yemenite T Karman and an H Obama - cultured and raised into an Indonesian Madrasa - were sadly elevated to the ranks of Boris Pasternak?
- (II) in an exercise of verbal and muscle supremacy, the Covid-19 was erroneously and deliberately denoted as the "Chinese virus". Furthermore, at an equally measure of ignorance, covid-19 was celebrated as the tiniest mujahidin of Allah who permitted their release to wipe congregations of the infidels. Notwithstanding this absurd logic, vaccines to protect individuals, specifically the old-aged ones, of contracting Allah's warrior; Covid-19 were manufactured by the same very infidels, Russian, Chinese and Western pharmaceuticals. The intellectually shallow individuals on either side failed to realize; the most recent scientific publications are proposing: viruses are the most numerous biological entities on Earth. For example, a teaspoon of seawater embraces ten million virions whose combined weight is ~3-times that of the planet's human population. The estimate is 500,000 species of virus have the potential to become zoonotic, i.e., to leap from animals to humans; most likely as covid-19 did. Moreover, it is entertained "We are still very, very far from having sampled even a tiny proportion of all the viruses that are out there lurking in different species." Furthermore, the more human genomes and that of other species are sequenced, may yield mechanisms of ancient epidemics and which viruses are driven by pandemics in the past.
- (III) at his typical maximal patience and professionalism, Sissi is trying to peacefully untie the rampant negative ramifications of the Ethiopian scheme of "Grand Renaissance Dam", a religious militant waved the favourite, however corrosive slogans of the futile mythological wrestling. Visualize, R Yassin, supposedly an

expert in political and African affairs in the Emirates, roared: peace, mercy and blessings of God be upon you. The matter, the Renaissance Dam, has transcended division and the Greater Middle East project into our demise as an Arab nation as an Arab Islamic nation! This is a tampering with the topography of the entire region aimed to at coercing Egypt to pay the price for drinking water/ or impoverishment. To religiously flare the audience, R Yassin intentionally quoted the book of Isaiah 19. Thus, crystallized her dogmatic perception of the Ethiopian Renaissance Dam as: it is one of the images of the fourth generation Zionist-American unconventional wars, and

(IV) as of the 1952, the greater Cairo metropolitan region has witnessed an alarming urbanization of the arable lands. Rather than actualizing their ambition in the abundantly available sandy desert; egotistically claiming industrialization in lieu of the historical reliance on agricultural practices, the Wahhabi 1952-coup officers accelerated the irretrievable devouring of the Delta arable expanse in favour of mammoth cement industrial complexes. To top it, the accelerated loss of the fragmented arable landscape in favour of urbanization prompted significant socioeconomic decay as in astronomical marital failures, ineptness of educational and medical care to cover for the novel human clusters. According to estimates, ~60 of Cairo and ~90% of Giza are uninvented settlements built on agricultural lands. Hence sporadic ghettos of the dispossessed within/ or at the boundaries of the large cities were baptized.

As colonel Nasser basked in his circumstantial USSR-USA weaved euphoria of international victory over the 1956-tripartite aggression, he endeavoured more threatening recklessness in a megalomaniac soup of disastrous quixotic adventures. Together with the accelerated disintegration of the social structure of Egypt during the Sadat-Mubarak eras, the massive 2012 revolution was imperative. Two H vultures, Hilary and Hussein were closely observing the detailed events of this passive revolution. Erroneously, both entertained the modality of Gertrude Bell and TE Lawrence respectively to dismantle Egypt as Turkey was dismantled earlier. Therefore, Clinton-Obama unlawfully seized the toil of the puritan Egyptian youth in favour of the militant Wahhabis. However, their gamble failed as the combination Clinton-Obama was an ineffectively pale and unimaginative copy of G Bell - TE Lawrence, Egypt is historically cultured with distinct civil values vis-à-vis Al Uthman in Turkey, and most critically the Egyptians had the charismatic General Sissi vis-à-vis Mehmed V Reşad of Al Uthman. Thus, in less than a year, in July 2013; the Egyptian ladies among the 30 million compatriots placed Egypt in the capable hands of General Sissi. In this context, the sacrifice of Menas Daniel has revived the Ancient Egyptian sophistication, viz., the Ancient Egyptian genius of prosthetic toe which dwarfs the surreal toxic ridicules of Agathon; a radical Wahhabi prelate, below. (Figure 14)

Materials and methods

- (I) 1000Kg silt of High Dam deposits around dongola station was delivered to our location/ Alexandria,
- (II) to remove possible microplastics and human organic residues, a desalination RO/ 20 Gal d⁻¹ was provided with a Nano Micro ultra-filtration membrane and conductivity meters were purchased from China.
- (III) to avoid products contracting toxins fertilizers and pesticides, chicken and rabbits were organically raised as a source of protein for human consumption and availability of organic fertilizers. Feces was collected on daily basis and equal weights were well mixed,

- (IV) to allow smooth release of irrigation RO treated water; holes of 1 cm diameter were punctured in the large- side bottom of plywood wooden vegetation boxes (2cm thickness). These boxes were tailored to dimension of 35x60x100 cm, and each wooden box was layered with 15 cm thickness RDSD over 10 cm thick layer of sand, and.
- (V) A semiautomatic chemistry analyzers Biobase (China) was used. Diagnostic reagents applied to assay for total protein, glucose, carbohydrates, lipids and cholesterol were prepared in our laboratories.

Figure 14. Situation

Figure 15. According to June 1st 1885 law, foreigners or Arabs, permitted to run a prostitution business

Table 1. Above data is the average of three experiments. Uncertainty in each is + 7 - 16%; Nutrients in grams per 100g raw yield

	Tomato	Fava beans	Red Pepper	Green Pepper	Potato Boiled	Skin Zucchini	Carrots	Cabbage	Corn
Protein	0.93	16.3	1.39	0.936	1.56	1.29	1.29	1.39	3.63
Carbohydrate	3.96	57.3	6.63	6.45	16.3	3.16	9.69	5.82	25.2

Fiber	1.23	9.45	2.19	1.71	1.54	1.36	2.07	0.27	2.54

Experimental

- (I) Away from congregations of tourists in hotels, Sidi Kerir Village ~38 Km location from Alexandria was preferred as a site that is conveniently less polluted. Desalinated sea water was collected in 4Gal Scotts containers.
- (II) vegetable seeds as indicated in results below were allowed to germinate and grow until maturity in vegetation boxes,
- (III) on the 5th day each week, organic rabbits/birds manure was equally distributed on the surface of the vegetation boxes. Late in the afternoon, vegetation boxes were sprayed with desalinated water, and
- (IV) three trials of vegetations were carried out. Yields were collected and assayed for organic contents.

Table 1 below embraces analytical data per 100g of raw yield.

Conclusion

Provided High dam sediments are embracing the internationally accepted levels of Pb, Hg and other heavy metals, above research toil is indicative of the vivid feasibility of exploiting current technologies in turning the sandy aid lots into green oasis for availing healthy sustenance of vegetables for the public. Our trials could be a logical parallel to the Dutch trials of ameliorating the Sinai desert into green, viz., “*In China, scientists have turned vast swathes of arid land into a lush oasis. Now a team of maverick engineers want to do the same to the Sinai*” [31] (Figure 15).
